The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5, 12, 14, and 15 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Bertagnoli, US 5,480,442. The embodiment of Figure 5a, for example, comprises a tubular section **50** defined by an outer wall **66** in the form of a net (column 5, lines 42-44), which inherently possesses a plurality of openings. The wall of the load bearing member **50** may have perforations or be in the form of a grate (column 2, lines 30-31; patent claims 4 and 5). Figure 5a also illustrates a base plate **51** and/or **52** and a top plate **53** connected (via nut **56**) with the base plate. The top plate **53** is tiltable about an angle to the longitudinal axis of the tubular section **50** (column 6, lines 10-13). Regarding claim 2 and 12, since the nut **56** and the semi-spherical part **52** are of materials innately having an elastic modulus, these components are inherently elastic to some extent. Regarding the “second element” (Applicant’s claim 12, line 9), the aforementioned angularly adjustable support element can be provided at *both* ends of the central load bearing member **50** (patent claim 1; abstract; column 2, lines 9-22; column 5, lines 29-35; etc.).

The Applicant’s remarks have been considered but are deemed moot in view of the new grounds of rejection.
